PAPER HELICOPTER

You will need:

Scissors
Crayons or markers

Instructions:

A) Carefully cut out the pattern at right on the heavy black lines.

B) Next make three cuts as indicated by the blue lines on the diagram.

C) Now it's time to fold! Follow the instructions printed on the diagram. Fold section 1 forward and section 2 backwards. (These are the helicopter's "blades".) Then fold in sections 3 and 4. Lastly fold up section 5.

D) That's it! Once you know how to make them, you can create a whole fleet of helicopters in different sizes. Use your crayons or markers to decorate them.

To fly:

Grasp your helicopter by the rectangle immediately below the blades. Swiftly pull your hand downwards and release quickly. The blades will begin to spin and your helicopter will fly!

1. Fold forwards
2. Fold backwards
3. Fold forwards
4. Fold forwards
5. Fold up
